

FBAR Mock API Contract

Mock FBAR Filing API — Contract (for test-harness use)

This describes a **synthetic** REST API surface, backed by `synthetic_fbar_filings.json`, that the case-management app can call against during integration testing. Nothing here represents an actual FinCEN/BSA E-Filing endpoint or credential — it's a stand-in your test harness (e.g. WireMock, Prism, json-server, or a small Express/Flask stub) can implement so downstream workflows can be exercised without touching production BSA data.

Base

```
GET /api/v1/fbar/filings
GET /api/v1/fbar/filings/{bsaId}
GET /api/v1/fbar/filings?taxYear={yyyy}
GET /api/v1/fbar/filings?tin={tin}
GET /api/v1/fbar/filings?filingStatus={status}
GET /api/v1/fbar/filings/{bsaId}/accounts
GET /api/v1/fbar/filings/{bsaId}/pdf (streams/redirects to the filing's specimen PDF)
POST /api/v1/fbar/filings/{bsaId}/case-link (associates a filing to a case ID)
```

Auth (simulate, don't build real IAM here)

- Authorization: Bearer <token> — required on all routes.
- Missing/expired token → 401 with `{"error": "unauthorized"}`.
- Valid token but caller's role lacks `fbar:read` scope → 403 with `{"error": "forbidden", "requiredScope": "fbar:read"}`.
- Token valid but case-context doesn't match filing's assigned case (row-level authz) → 403.

Pagination

?page=1&pageSize=25, response envelope:

```
{ "data": [ ... ], "page": 1, "pageSize": 25, "totalRecords": 50, "totalPages": 2 }
```

Standard error envelope

```
{ "error": "string_code", "message": "human readable", "traceId": "uuid" }
```

Storage backing this contract

In the prototype, `GET /filings*` routes read from **DynamoDB** (the JSON filing records), and `GET /filings/{bsaId}/pdf` reads the PDF bytes from **S3**, using the `pdfDocument` pointer stored on the DynamoDB item. See `dynamodb_schema.md` for the table/GSI design and why the PDF itself isn't stored inline in DynamoDB.

Status codes to implement in the stub

Code	Meaning
200	success
400	malformed query param (e.g. non-numeric taxYear)
401	missing/invalid auth
403	authenticated but not authorized for this record/scope
404	bsaId not found
409	case-link conflict (already linked to a different case)
422	semantically invalid filter (e.g. taxYear out of supported range)
429	rate limited
500 / 503	simulated upstream (BSA system) failure, for resiliency testing
